PRIVATE  
TOUR

6 TO GO

Only found in the world within the Komodo National Park and the surrounding Flores Island, these Jurassic and majestic creatures are the park's star attraction. Although awesome to see, visitors are urged to keep a distance and exercise caution. Always be accompanied by a ranger and follow all the ranger's instructions when in the proximity to these dangerous lizards. Approximately reaching 3 meters in length and weighing over 70kg, the Komodo Dragon (or otherwise known as *Varanus Komodoensis*), is the world's largest lizard and reptile. The dragons are identified by their massive size, flat heads, bowed legs, long thick tails, and fork-shaped tongues. Komodos can run and swim up to 20kph and have an excellent vision where it can see objects from 300m away. A fierce predator, these reptiles are carnivores and can eat 80% of their weight in one feeding. The Komodo can consume very large prey such as water buffalo, deer, carrion, pigs and even humans.
